### **Rockwell Automation Self-Administered Cardiorespiratory Test**

#### READ THIS ENTIRE DOCUMENT BEFORE ATTEMPTING TO ADMINISTER THE TEST

#### **Overview**

Rockwell Automation employees may self-administer the cardiorespiratory test as an alternative to the three-minute step test available at onsite screenings. You may do the self-administered test if you: (1) work at a location that does not have a company-sponsored Numbers@Work health screening with step test; (2) are unable to attend a Numbers@Work health screening with step test; (3) prefer to receive your screening values from your primary care provider, which would only offer cardiorespiratory testing to those who clinically require it; or (4) submit a home test kit for your blood work and also want to submit your cardiorespiratory results.

## **Purpose**

Your cardiovascular fitness level will be determined by measuring your heart rate after walking as fast as you can for 1 mile. Cardiovascular fitness is the ability of the heart and lungs to efficiently supply oxygen and nutrients to working muscles, allowing you to perform physical activity over a long period of time. The faster your heart rate recovers after activity, the better your cardiovascular fitness. Regular physical activity can improve your recovery heart rate and reduce the risk of heart disease and unhealthy weight gain.

### **Equipment Required**

- 1-mile track, 1-mile flat course, or treadmill
- Scale
- Stopwatch
- Pen and paper
- Athletic shoes and comfortable clothing

#### **Special Considerations**

- If you have health concerns, a history of high blood pressure or a heart condition, you must consult with a doctor before participating.
- If you do not exercise regularly, allow extra time for warming up and cooling down.
- Feel free to ask a family member or friend to help monitor and record results.
- Be aware that caffeine or nicotine consumption on the day of the test may impact heart rate.

#### Before You Start

Before you start preparing, take the Physical Activity Readiness Questionnaire to see if you are physically able to complete the cardiorespiratory fitness test:

- Has your doctor ever said that you have a heart condition <u>and</u> that you should only do physical activity recommended by a doctor?
- 2. Do you feel pain in your chest when you do physical activity?
- 3. In the past month, have you had chest pain when you were not doing physical activity?
- 4. Do you lose your balance because of dizziness or do you ever lose consciousness?
- 5. Do you have a bone or joint problem (for example, back, knee or hip) that could be made worse by a change in your physical activity?
- 6. Is your doctor currently prescribing drugs (for example, water pills) for your blood pressure or heart condition?
- 7. Do you know of any other reason why you should not do physical activity?

If you answered yes to any of the above questions, consult your doctor before taking the cardiorespiratory test.

### **How to Prepare**

- 1. Identify your course. A walking track is preferred, or you can measure a 1-mile flat course. You may also use a treadmill. If the course is outdoors, you will want to choose a calm day to do your test.
- 2. Practice taking your pulse (or you may use a heart monitor if you have access to one). Here's how:
  - a. Gently place the forefinger and middle finger of one hand on your opposite wrist with the palm facing up.
  - b. Your fingers should be just below the wrist creases at the base of the thumb. Nestle your fingers to the outside of the large tendon that pops up if you bend your wrist toward you.
  - c. Press lightly until you feel blood pulsing under your fingers—you may need to move your fingers around until you feel a pulse.
  - d. Count the beats for 15 seconds and multiply that number by 4.

### **Take the Cardiorespiratory Test**

- 1. Go to the course and spend 5 10 minutes warming up by walking at a comfortable pace.
  - a. If you are using a treadmill, set the incline to zero.
- 2. Start the stopwatch and walk as fast as you can while being safe for 1 mile.
  - a. Do not run—remember, this is a walking test.
  - b. Stop the test if you become dizzy, nauseous or light-headed.
- Stop the stopwatch as soon as you finish 1 mile and record the time to the nearest second.
- Take your pulse immediately. Remember to take your pulse for 15 seconds and multiply the result by 4 to obtain your beats per minute. Record the results.
- 5. Spend 5 10 minutes cooling down by walking at a comfortable pace.
- 6. On pages 5 6, record your results, calculate your score and identify if you met the healthy target for your gender and age.
- 7. Complete page 2; send page 2 only to StayWell by Dec. 31, 2014.

#### Questions?

Call the StayWell HelpLine at 1-800-721-2696. Hours are Monday through Thursday from 8 a.m. to 8 p.m. Central time; Friday from 8 a.m. to 6 p.m. Central time; and Saturday from 8 a.m. to noon Central time.

## Fill in My Results

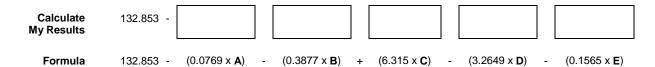

Record your results as follows:

	Α	В	С	D	E
	Weight in pounds	Age in years	Male = 1 Female = 0	Time in minutes, as a decimal	Heart rate in beats per minute
My Results					

## **My Calculation**

Calculate your score using your results above and the equation below or call the StayWell HelpLine at 1-800-721-2696, and StayWell will calculate your results for you.

1. A sample calculation is provided below

2. Record your score from above calculation:
